INSTRUCTORS

Roussos Dimitrakopoulos is a Professor and Canada Research Chair (Tier II) in Sustainable Mineral Resource Development and Optimization under Uncertainty, and Director of the COSMO - Stochastic Mine Planning Laboratory. He holds a PhD from Ecole Polytechnique de Montreal and an MSc from the University of Alberta. He works on risk-based simulation and stochastic optimization, as well as on artificial intelligence applications in mine planning and production scheduling, along with the simultaneous optimization of mining complexes and mineral value chains under uncertainty. He has taught short courses and worked in Australia, North America, South America, Europe, the Middle East, South Africa and Japan. He received the Synergy Award of Innovation in 2012 by the Governor General of Canada for research contributions to mining science and engineering and his long-standing partnership with AngloGold Ashanti, Barrick Gold, BHP, De Beers, IAMGOLD, Kinross Gold, Newmont and Vale. In 2013, he received AIME’S Mineral Economics Award, was a CIM distinguished lecturer in 2015-2016 and became a CIM Fellow in 2018.

Ryan Goodfellow is currently a Sr. Technical Specialist in Mine Optimization at Newmont, in Denver, CO, USA. At Newmont, his role is to develop and implement new optimization workflows at Newmont’s worldwide operations to unlock hidden value. Previously, Ryan was a research fellow for COSMO - Stochastic Mine Planning Laboratory at McGill University, where he received a PhD in Mining and Materials Engineering. His research focuses on developing advanced models and concepts for the integrated optimization of mining complexes with uncertainty and developing computationally efficient solution methods. His expertise includes major industrial applications in Au, Cu and Ni laterite deposits. Ryan represents the next generation of mining professionals, its up-to-date smart computing technologies and innovative thinking.

LOGISTICS

Lectures are given from 10 AM to 3 PM, Montreal Time (EST), with a break of about an hour. Virtual link will be provided.

COSMO - Stochastic Mine Planning Laboratory, a global center for leading-edge research and graduate education in ‘orebody modelling and strategic mine planning with uncertainty’, is supported by AngloGold Ashanti, Anglo American, BHP, De Beers, IAMGOLD, Kinross Gold, Newmont, Vale, and the Canada Research Chairs Program, NSERC, and CFI.

PROFESSIONAL DEVELOPMENT SERIES 2023

STRAIGHT RISK QUANTIFICATION AND MANAGEMENT FOR ORE RESERVES AND MINE PLANNING

STRAIGHT MINE PLANNING WITH NEW DIGITAL TECHNOLOGIES, RISK MANAGEMENT AND MINERAL VALUE CHAINS

TO BE OFFERED VIRTUALLY:
February 6-10, 2023
10:00 am to about 3:00 pm, Montreal time (EDT)
**CONTENT AND OBJECTIVES**

At the time of a continuing rebound of metal markets, learn how the application of new digital technologies can add substantial value to strategic mine planning and asset valuation. These new technologies and related tools integrate technical risk management while capitalizing on the synergies amongst the elements of mineral value chains from their simultaneous optimization – from mines to products to markets.

Learn how you can improve performance by:

- Learning the state-of-the-art strategic mine planning concepts and new approaches that unlock and add value to mining assets
- Finding out how to minimize technical risks and produce optimal pit designs with strategic mine planning processes and the next generation optimization methods
- Discovering methods and tools for the simultaneous risk-managing (stochastic) optimization of mining complexes and mineral value chains from mines to products to markets
- Discovering how the new developments will help you capture the “upside potential” in mine plans and minimize “downside risks”, as well as increase cash flows
- Exploring and learning from real-world examples, practices and comparisons in diverse applications, from gold and copper mines to iron ore and nickel laterites
- Understanding how to deal with blending and non-linear geo-metallurgical interactions in the processing streams, as materials are transformed from bulk material to refined products
- Learning about new artificial intelligence technologies and the self-learning mining complex perspective
- Participating in hands-on computer sessions that show how to increase project value by employing new risk-managing simultaneous optimization models

**RISK MANAGEMENT IN MINING**

- Pit design and production scheduling with simulated orebodies
- Stochastic pit limits are larger and pushback design with grade uncertainty
- Risk based optimal design for sublevel open stope, and lessons learned
- Product quality management and production scheduling with simulated deposits
- Stochastic production scheduling application and comparison to conventional scheduling

**THE NEXT LEVEL: MINING COMPLEXES AND MINERAL VALUE CHAINS**

- Mining complexes – mineral value chains and new smarter digital technologies
- Simultaneous optimization of mining complexes from pit to port with geological (supply) uncertainty, stockpile and blending optimization, processing and CAPEX options
- Industry examples and comparisons: diverse applications from gold and copper mines to iron ore and nickel laterite
- Blending and non-linear geo-metallurgical interactions in processing streams as materials are transformed from bulk material to refined products
- Dealing with exceptionally large mining complex optimization models
- Optimization of mining complexes with joint supply (raw materials) and demand (markets)
- Linking long- and short-term planning in mining complexes
- Introducing the self-learning mining complex

**COMPUTER WORKSHOPS**

- Uncertainty modelling and risk quantification in existing designs – choosing a robust design
- Step-by-step simultaneous stochastic optimization of a copper-gold mining complex
- Assessment of the strategic plan for the copper-gold mining complex

**WHO SHOULD ATTEND**

This course is designed for mining engineers, mine planners, mine geologists, project managers, resource analysts, involved in feasibility studies, development and operations, interested in new technologies for risk management and optimal decision support.

Please note: It is strongly recommended that participants bring a laptop.
